

# 5 STEP TREE PLANTING

1. Dig your hole.
  - a. Width: 1½ times the diameter of the pot
  - b. Depth: about 3 inches deeper than the pot
2. Condition your soil.
  - a. Mix ⅓ NutriMulch with ⅔ natural soil
3. Place your tree in the hole and fill in with conditioned soil.
  - a. (If your tree roots are wrapped in burlap, undo the top and leave the burlap)
4. Compact the conditioned soil around the roots and create a basin around the trunk.
5. Mix Root Stimulator with water in a 5 gal bucket and water your tree with the mixture.
  - a. 3½ tablespoons of Root Stimulator to 1 gallon of water
  - b. Add Root Stimulator every 2-3 weeks for a total of 3 times.

## Tips and tricks:

- Plant in the evening or in the morning, when it's cooler
- Keep your tree damp not wet. People generally overwater instead of underwater.
